Mr Peter Burnett exhibited photographs of a rare

fish, *Holacanthus tricolor*, which was caught by a Lossiemouth fisherman near Stornoway, and which was presented to Elgin Museum by the Rev. Dr Gordon, Birnie. A photograph was also shown of a new shell *Bulla striata*, two specimens of which were found near Durness, Sutherlandshire, and on the shores of North Uist. Dr Gordon, of Birnie, who sent the specimens of the shell to Mr Jeffreys, author of 'British Conchology,' thinks that, in view of the wide range of locality, fresh specimens of *Bulla striata* may be hopefully looked for on the north and north-west shores of Scotland. Neither the *Holacanthus* nor the *Bulla* has, as yet, been classed in the British fauna.

A letter was read from Mr Wallace, Inverness, Secretary of the Northern Association of Literary and Scientific Societies, intimating that the joint-meeting will be held this year at Inverness. Mr Wallace expressed the hope that the Banffshire Club would be well represented, both by papers and members.

After some discussion regarding the summer excursions of the Club, the meeting was brought to a close with a vote of thanks to the Chairman.
